Bau Bildung International

Europe | Asia

Technology Transfer and Market Development by VET

Construction needs education!

The construction industry has to meet increasingly complex requirements. Energy-efficient construction, technical innovations, sustainability and interdisciplinary working processes are ongoing trends in the industry. Demanding, international projects require well-trained specialists. Bau Bildung Sachsen and Bau Bildung Sachsen-Anhalt develop and carry out vocational training courses for the construction industry both nationally and internationally.

Green building around the world

Our international commitment

Bau Bildung Sachsen e.V. and Bau Bildung Sachsen-Anhalt e.V. has been working on an international level since the 1990s. Our focal point is Asia, where our educational projects focus particularly on the fields of **energy efficiency, green building, water and waste water management, air and water filtration** as well as **building automation**.

„German products and technologies are innovative, sustainable and therefore requested worldwide. However, in the target markets only few specialists are able to implement modern construction processes. We have made it our mission to develop tailor-made trainings for certain products and technologies in order to support German sales abroad.“

Prof. Dr. Jens-Uwe Strehle
General Manager Bau Bildung Sachsen e. V.
and Bau Bildung Sachsen-Anhalt e. V.

Making a difference I in Europe

Expertise in Europe

Long-term experience in EU projects (Erasmus+ und Leonardo)

Not only do Bau Bildung Sachsen e. V. and Bau Bildung Sachsen-Anhalt e. V. belong to the leading VET providers in Germany. We we have been working in European projects for over 20 years.
Our goal here is to support specialists of the building industry in Europe, to prepare them for future challenges, to discuss innovations on an international level and to promote up-to-date topics, such as:

- digital teaching and learning
- action-oriented teaching and learning
- sustainable construction
- energy-efficient construction
- trainee and apprentice recruitment
- qualification of the middle management

recruiting young talents

Construction companies in Germany are looking for new ways to attract young employees.

Through our national and international networks, Bau Bildung has managed to establish stable employment services for both foreign applicants and construction companies in Saxony and Saxony-Anhalt.
By now young people from China, Vietnam, Mongolia or Poland are receiving professional training in the fields of building construction, civil engineering or interior construction in our locations in Saxony and Saxony-Anhalt.
Bau Bildung accompanies and supports trainees from the early enrolment process up to their skilled worker's certificate.

A strong partner for the economy
We retain contacts and partnerships in various countries. Through education we support our business partners in opening up new markets, market cultivation and recruitment of foreign specialists.
We are convinced: Good products and innovative ideas are only as good as the skilled workers using them.

I in East Asia

Core competencies in East Asia

Know-how- and technology transfer

For over 10 years Bau Bildung has been building up stable contacts and competencies in Asia.
In this context we are not only trainers, but also network partners and project managers.

Focal points

- Energy efficiency
- Green building
- Building automation
- Modern building materials
- Wastewater and water management
- Air and water filtration
- Traditional construction professions

Services

- Demand-oriented development of vocational education and training institutions
- Professional training with demonstration plants
- Curriculum development
- Qualification of teachers and trainers
- Summer courses in Germany
- Project management and support for funded projects, e.g. develoPPP

References / successfully implemented projects

- Strategic Alliance for Construction (SG-TQC)
- Passive and low-energy house technologies
- Photovoltaic systems for the self-sufficient energy supply
- Filtration of drinking water and breathable air
- Pipeline management and urban drainage
- Drinking water heating and legionella prevention
